

Marketing Funnel & Conversion Performance Analysis

Future Interns – Data Science & Analytics Internship (Task 3)

Objective

The objective of this project is to analyze marketing campaign data to identify conversion patterns, evaluate channel performance, and discover opportunities to improve lead-to-customer conversion rates.

Dataset Overview

The analysis was performed using the Bank Marketing Dataset containing customer demographic information, campaign details, and subscription outcomes.

Dataset Summary

- Total Customers: 41,188
- Converted Customers: 4,640
- Non-Converted Customers: 36,548
- Overall Conversion Rate: 11.27%

Tools Used

- Python (Pandas)
- Tableau Public
- Jupyter Notebook

Dashboard Metrics

KPI Metrics

- Total Customers: 41,188
- Converted Customers: 4,640
- Conversion Rate: 11.27%

Visualizations Created

1. Conversion by Contact Type
2. Conversion by Job
3. Conversion by Education
4. Conversion by Previous Campaign Outcome
5. Conversion by Month

Key Findings

1. Contact Type Performance

Customers contacted through cellular communication showed significantly higher conversions compared to telephone contacts.

2. Job-wise Conversion Analysis

Students and retired customers demonstrated higher conversion rates than most other occupational groups.

3. Education Analysis

Customers with university degrees and professional qualifications showed better conversion performance compared to lower education categories.

4. Previous Campaign Outcome

Customers who had previously responded successfully to campaigns achieved the highest conversion rate (approximately 65%), making this the strongest predictor of future conversion.

5. Monthly Performance

March and December recorded the highest conversion rates, indicating seasonal opportunities for targeted marketing campaigns.

Recommendations

Recommendation 1

Increase marketing efforts through cellular channels as they generate better customer engagement and conversion rates.

Recommendation 2

Retarget customers who responded positively in previous campaigns, as they have a significantly higher probability of conversion.

Recommendation 3

Develop specialized campaigns targeting students and retired customers, who demonstrate stronger conversion behavior.

Recommendation 4

Allocate additional marketing budget during high-performing months such as March and December to maximize campaign effectiveness.

Recommendation 5

Use customer demographic information and campaign history to create more personalized marketing strategies.

Conclusion

The analysis identified several factors that strongly influence customer conversion. Contact method, previous campaign success, customer occupation, and campaign timing all play important roles in marketing performance. By focusing on high-performing customer segments and optimizing campaign strategies, organizations can improve conversion rates and increase overall marketing effectiveness.
