

Superstore Sales Performance Dashboard

Future Interns - Data Science & Analytics Internship

Task 1: Sales Performance Dashboard

Prepared By: N.J.Hamshalekha

Date: June 2026

Objective & Dataset Description :

1. Objective :

This project's goal is to use the Superstore information to monitor sales performance and develop an interactive Tableau dashboard. In order to support business decision-making, the study assists in identifying top-selling products, category performance, regional performance, and sales trends.

2. Dataset Description :

The dataset used for this project is the Sample Superstore dataset.

Dataset Information:

- Total Rows: 9,994
- Total Columns: 21

Important Columns:

- Order Date
- Sales
- Profit
- Quantity
- Region
- Category
- Sub-Category
- Product Name
- Customer Name

The dataset contains information about customer orders, product sales, profits, discounts, and shipping details across different regions of the United States.

3. Data Cleaning Summary :

- The dataset contains 9,994 rows and 21 columns.
- Missing values found in 0 columns.
- Duplicate rows found is 0.
- Data types were verified and corrected where necessary.
- Data quality checks were performed before analysis.

Analysis Results & KPI Section :

1. Key Performance Indicators (KPIs) :

The following KPIs were calculated from the Superstore dataset:

- Total Sales: \$2,297,200.86
- Total Profit: \$286,397.02
- Total Orders: 5,009
- Total Customers: 793
- Average Order Value: \$458.61

2. Sales Trend Analysis :

Year-wise sales analysis showed a positive growth trend over time.

Yearly Sales:

- 2014 - \$484,247.50
- 2015 - \$470,532.51
- 2016 - \$609,205.60
- 2017 - \$733,215.26

The highest sales were recorded in 2017, while the lowest sales were recorded in 2015. The business experienced significant growth during 2016 and 2017.

3. Regional Analysis :

Sales performance varied across different regions.

West Region: \$725,457.82

East Region: \$678,781.24

Central Region: \$501,239.89

South Region: \$391,721.91

The West region generated the highest sales, while the South region generated the lowest sales.

4. Category Analysis :

Technology: \$836,154.03

Furniture: \$741,999.80

Office Supplies: \$719,047.03

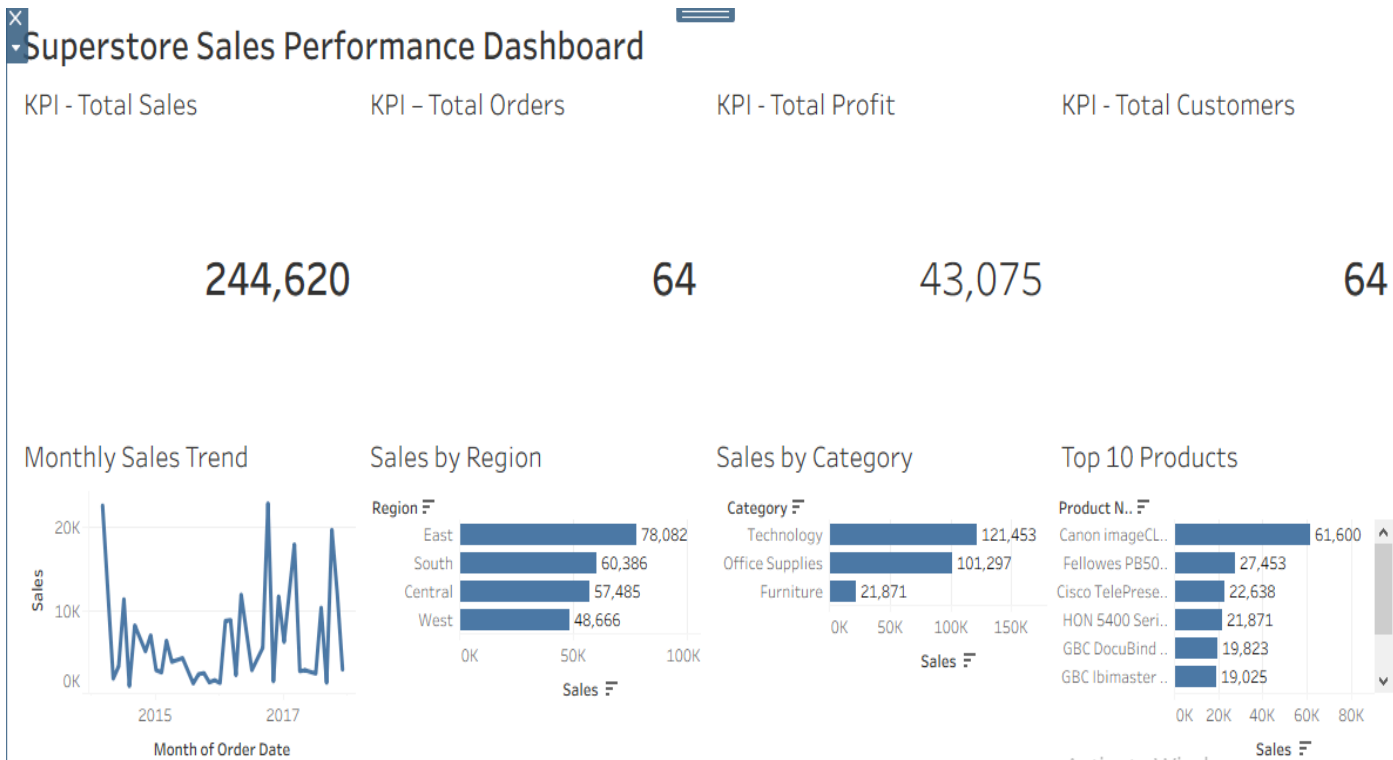

Technology was the highest revenue-generating category and contributed significantly to overall business performance.

5. Product Analysis :

The top-performing product was Canon imageCLASS 2200 Advanced Copier.

This product generated the highest sales and profit among all products in the dataset. High-performing products play a major role in increasing overall revenue and profitability.

Dashboard Visualization :

Business Recommendations :

1. Since technology products yield the biggest sales and profit, spend more on them.
2. Concentrate marketing efforts on the West, which generates the most income.
3. Examine the performance of subcategories that are losing money, including bookcases and tables.
4. To increase sales, advertise best-selling items like the Canon imageCLASS 2200 Advanced Copier.
5. Keep using the tactics that helped generate significant sales increase in 2016 and 2017.

Conclusion :

Through data analysis and visualization, this study effectively examined the Superstore sales information and found significant business insights.

An interactive perspective of sales performance, customer activity, product performance, and regional trends is offered by the Tableau dashboard. The results can assist companies in making data-driven choices to increase revenue and profitability.
